

End-to-end audited posterior workflow

The fast posterior is used only inside a reference-checkable operating contract.

Contract checkpoints

Audit outputs

- top-1 and top-K recovery
- KL / ECE / credible sets
- mask-aware missing-data tests
- confidence-gated exact reranking

Operating gate

calibrated posterior -> act / measure / rerank

low confidence -> exact or high-fidelity review

fallback is explicit rather than hidden in the fast path
